	SQ Mica - 5 g - of choice.....
	Cosmetic water-based colorant - 10 ml - of choice.....
	Wooden stirrer - 2 pieces
	Ointment jar - transparent + lid - 20 ml - 2 pieces

**Materials**

- Liquid basic soap - suspension - 500 ml
- Plastic bottle 250 ml
- Fragrance oil for pour soap
- Wooden stirrer
- Colorant (SQ Mica or water-based colorant)
- Ointment jar 20 ml
- Cosmetic glitter

**Manual**

- Take the 500 ml bottle with liquid suspension soap and fill the 250 ml bottle to about 2 cm below the edge, in order to have enough space left for the fragrance oil.

**Options a, b and c (liquid suspension soap with fragrance oil)**

**a. Water-based colorant with / without cosmetic glitter**

Add the colorant to the liquid suspension soap as desired. We suggest 6 to 8 drops. Place the lid on the bottle and shake well. If necessary, more colorant can be added to the suspension soap. Adding glitter: put the fragrance oil for pour soap in the ointment jar (about 5 ml for 250 ml liquid suspension soap should be sufficient) Add a levelled spoon of cosmetic glitter to the fragrance oil.

Turn the lid on the ointment jar and shake well. Next, add the mixture to the liquid suspension soap and shake as well.

### **b. SQ Mica with / without glitter**

Add about 5 ml fragrance oil to the empty ointment jar. Then add half a spoon of SQ Mica, together with cosmetic glitter. Turn the lid tightly and shake the jar. You can now add the mixture to the bottle with liquid suspension soap. Turn the lid on the bottle and shake well.

### **c. Cosmetic glitter**

Put the fragrance oil in the ointment jar (about 5 ml for 250 ml liquid suspension soap). Add a levelled spoon of cosmetic glitter to the ointment jar with fragrance oil. Turn the lid on the ointment jar and shake well. Then, add the mixture to the liquid suspension soap.

### **Tips & tricks**

- We always recommend making a small test production when you work with cosmetic glitters as they can affect the colorants (SQ-Mica and water-based colorant).
